

Gateway as a Service

Meet face to face. Share content. And do it without having to overhaul your current investment in video collaboration technology. That's the advantage of AVI-SPL's Gateway as a Service. **Connect Microsoft Skype for Business, Lync, Office 365 and Surface Hub to virtually any audio or video conferencing solution.**

Native Interoperability with Skype for Business

AVI-SPL's Unify ME platform enables interoperability between Microsoft Skype for Business and other standards-based protocols (SIP, H323, WebRTC), including your Cisco and Polycom endpoints.

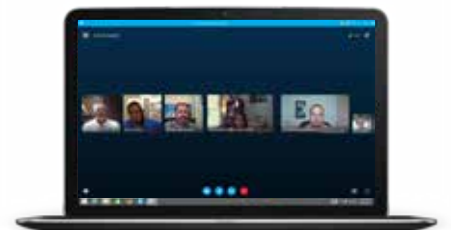

Connect Skype with virtually any audio or video conferencing solutions. You retain the native Skype for Business experience, no matter what your other collaborators are using.

Support for Surface Hub

Connect your Surface Hub to other video conferencing solutions.

Point-to-Point Calls

Connect with colleagues and external partners, and do it between Skype and video conferencing room systems. You can even connect to collaborators calling through WebRTC.

Make the Most of Your Current Investments

Our cloud service makes continuous improvements so that you always have the latest technology, but none of the costs of a capex investment.
