PROVOKE THE SENSES
HOW BETTER SOUND CAN CREATE A DISTINCTIVE STAY

FOR YOUR GUESTS, THERE IS NO TYPICAL STAY

Indulgent cuisine. Inspired design. Carefully curated touches. When a guest wakes up in your hotel, they know they're not waking up just anywhere.

From the time they walk in to the moment they check out, you're all about bringing their senses alive. For you, sound isn't a background consideration. It's a crucial element of the atmospheric mix in your hotel.

At Bose, we understand that. Our sound systems can be designed to use music and sound to entertain, invigorate, and help turn a stay at your hotel into a memorable and special experience. They also can be designed to work with a wide range of budgets and requirements.

With Bose, the technology is advanced. The operation is intuitive. And the ability to blend with your distinctive style is seamless.

USING BOSE SOUND TO CARRY YOUR UNIQUE STYLE TO EVERY GUEST EVERYWHERE IN YOUR HOTEL

Lobby, reception & common areas

When your guests arrive, you want them to realize they're checking into an experience as much as a room. With clear, natural sound and even coverage, a Bose solution can create that experience from the moment they step through the door and carry it through nearly every moment of their stay.

Restaurants & dining

Whether it's a convenient grab-and-go option, traditional three-meal service, or the uncompromising cuisine created by a celebrity chef, your restaurants and dining spaces create their own individual experiences. A Bose partner can design each system to create the feel you want in each setting.

Bars & lounges

A signature sound experience, much like a signature cocktail, can help create just the right mood to make your bar or lounge a destination for guests and non-guests as well.

Huddle spaces

You want your guests to have everything they need, and that includes a spot for quick and informal meetups. Bose solutions seamlessly bring together audio and video so people can work together better in person and online.

Conference & meeting rooms

Innovation and new ideas often spring from inspiration. A Bose system can be designed to support audio/video presentations, brainstorming, and collaboration without the technology and equipment getting in the way.

Fitness centers

Music can motivate the spirit and the body. With full-range sound, easy-to-use controls, and automated operation, a Bose sound system can be an indispensable piece of cutting-edge workout equipment.

Pools

Sound can often get lost in an outdoor pool setting or harshly reflected in an indoor one. Bose brings together loudspeakers and electronics along with system expertise and design tools that solve the toughest acoustic challenges like those.

Spas

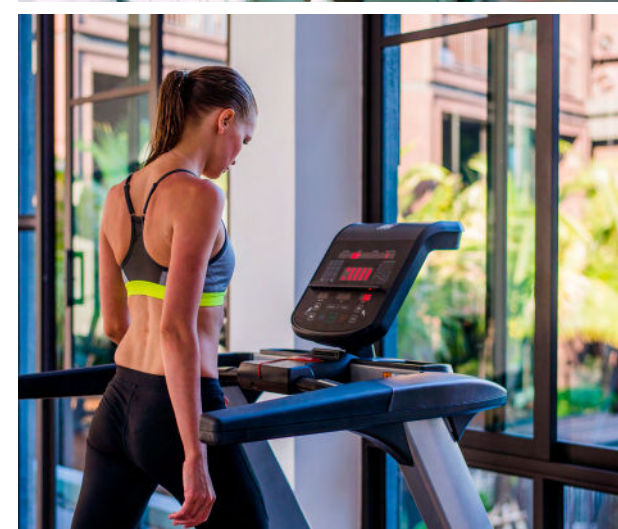

The ability of sound to create a soothing and tranquil environment can make it a key component of your spa. Bose systems deliver full-range sound, even at low volumes, creating a more natural and relaxing experience for your spa guests.

Outdoor patios

Patios can extend the distinctive experience you've created into the natural world outside. A Bose system can enhance the surroundings while blending neatly into the outdoor environment you've created.

THE AUDIO EXPERIENCE TO DELIVER A DISTINCTIVE AND MEMORABLE EXPERIENCE FOR YOUR GUESTS

For nearly 50 years, Bose Professional and our extensive network of audio professionals have provided solutions for a wide range of businesses, including boutique hotels and other hospitality venues. Whether it's relaxing background music in an atrium, or sound coverage for a wide variety of indoor and outdoor spaces, we can help. While no two installations are exactly the same, we've learned that all customers share a desire for full, natural sound, worry-free performance, and a system that's easy to use. All of which we engineer into every Bose Professional solution.

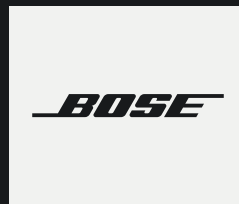

THE BOSE PROFESSIONAL PRIORITY

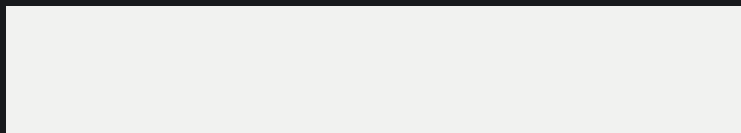

In the pro audio industry, collaboration brings a huge advantage — because our partners are experts. System designers, integrators, installers, sound engineers, musicians. They know sound. And they continually help us make better products.

We help our partners build incredible pro audio experiences — so their customers' businesses can be more successful, their workdays can be more productive, and their performances can be in the moment.
