

LG Signage Update for Higher Education

Inspire your creativity with these idea starters for digital signage displays on your higher education campus. Command student and staff attention across campus with compelling video and static images delivered through stunning indoor and outdoor signage.

Directories and Wayfinding

Help students find their way before they enter buildings with enclosed, energy-efficient outdoor displays that showcase directories and wayfinding maps. Built to resist dust, humidity and handle temperature and sun exposure, LG outdoor displays let students experience superb picture quality from almost any angle.

Inside, consider LG Smart Platform Digital Signage with Touch Overlay KT-T Series. Touch screen technology helps students navigate the building with ease and offers quick access to information. Displays offer dust and humidity protection as well as picture by picture and picture in picture capabilities.

Lecture Halls

Deliver sharp large-format images and video in large spaces like lecture halls. LG's Ultra Narrow Bezel Video Wall with 0.9mm bezel width help display near-seamless graphics. The viewing angle of this panoramic display allows students to see video and graphics clearly from any virtually any seat in the hall.

Common Areas

Don't miss an opportunity to connect with students and employees with creative signage designs powered by LG Open-Frame Curved OLED Displays. Convex and concave curves and bright graphics captivate and hold viewers' attention. Consider curved displays in Student Unions, lobbies, libraries, and social gathering areas.

Cafeterias

LG 88" Ultra-Stretch Digital Signage is ideal for digital menus in your cafeteria and quick service restaurants. Flexible mounting and orientation options let you install these screens on a wall or pillar. Complement your menu signage with SuperSign™ Commercial TVs to grab audience attention in this busy environment. The embedded SuperSign software lets you create and set viewing schedules without an extra PC.
