Pexip for Secure Communications

Inspire confidence with a scalable, secure meeting platform that puts you in control.

Trust Pexip to handle your classified conversations. Pexip provides a secure and private virtual meeting space that fulfills the most rigorous data protection needs while maintaining full control over your data. Choose the best-suited deployment model for your organization while maintaining full control over the deployment locations to easily comply with any regional data storage and transit requirements.

Only with Pexip for Secure Communications

Limit risk

Limit or remove exposure to the internet, greatly reducing risk for a breach

Protect your data

Absolute control over meeting data-including call records and other sensitive data

Remain compliant

Comply with data sovereignty laws and regulations that require storage in specific locations

Military-grade communications

Organizations handling classified information such as intellectual property, mergers and acquisitions, confidential client or patient data or surrounding national security concerns, need a video solution capable of handling confidential information.

Thanks to its flexible deployment options, Pexip can be configured to ensure all meetings and their data (and metadata) remain completely sovereign to your organization.

With Pexip for Secure Communications, your organization keeps full control of all Call Detail Records (CDR), and meeting details and patterns are never exposed to third parties.

Pexip is ideally suited to organizations that:

Need extra protection

Organizations that need to protect themselves against a possible breach of communication or associated data

Require authentication

Meetings where the organizers must ensure that only authorized (and identified) individuals enter a meeting

Flexible deployments

Organizations that are required to adhere to legislation around data sovereignty and location or prefer an air-gapped environment

Flexibility and control from policy

Pexip can deliver complete data control and deployment flexibility thanks to APIs and our policy stack. The policy stack allows you to create any desired workflow with policy. Although there is quite a lot of flexibility built into Pexip Infinity, simple plug-ins can help you achieve even more including:

- Unique authentication forms
- Validation loops
- Constraints or permissions
- Integration with a Zero Trust architecture

Beyond policies, Pexip can also be integrated with your preferred Identify Provider (IDP) to ensure the identity of any of your meeting participants and custom workflows mean that you can route call and meeting data to best suit your organization's needs.

Agile and adaptive

Pexip is simple to deploy and manage. Administrators can manage global capacity from a single management interface. When unexpected demands for additional use arrive, additional capacity can be added in minutes through our management tool. Pexip software can be hosted on-premise, in your preferred cloud solution, a private cloud, or a hybrid combination of any of these options.
