

# Pexip Government Cloud

FedRAMP®-Authorized  
Microsoft Teams Cloud Video Interop (CVI)

**U.S. Government-specific Cloud Video Interop allows officials to bridge their video meeting environments, such as Cisco or Poly, with Microsoft Teams. Agencies can host meetings, modernize IT, and ensure business continuity while simplifying everyone’s user experience.**

Pexip Government Cloud is a video conferencing SaaS for U.S. federal, state, and local government organizations. Governments can augment their existing on-premise video infrastructure and retain ownership of their meeting and calling routines. As SaaS or hybrid service model, government organizations maintain operational control of their endpoints and systems without incurring the long-term costs of developing and maintaining additional infrastructure.

**Pexip brings the modernized meeting experience to government agencies in the following ways:**

#### **Certified Cloud Video Interop (CVI) for Microsoft Teams**

Helps agencies securely collaborate on Microsoft Teams using even their traditional SIP/H.323-video systems as well as enterprise-class standards-based soft clients.

#### **Standards-based Virtual Meeting Rooms (VMRs)**

Provides a simple, easy-to-use meeting experience for customer video conferencing systems and clients, featuring Pexip’s native CMVP-validated FIPS 140-2 encryption suite.

#### **Secure and compliant self-hosted or hybrid video conferencing**

Gives agencies ultimate ownership over their call data. Pexip Government Cloud can be an extension to the agency’s existing on-premise environment, enabling video system integration with enterprise third-party applications and global policy frameworks such as Zero Trust Architecture (ZTA) and Secure Access Service Edge (SASE).
