

An Entertainment Complex With Impact

Advanced audio and video solutions turn an architecturally eye-catching venue into a high-impact live entertainment destination.

Wiring a State-of-the-Art Performance Venue

Nestled within the Lehigh Valley in Bethlehem, Pa., the ArtsQuest™ Center at SteelStacks™ is a testament to one nonprofit’s ambitious community outreach. While the eye-catching architecture of the 4-story performing arts center would surely draw in crowds, only the technology that provides a one-of-a-kind experience would keep them coming back.

“The views in and around SteelStacks are so incredible, we needed to design and implement a system that would live up to expectations – both for audiences and the performers,” says Dermot Lydon, AVI-SPL engineer. “At the same time, we were focused on making it easy for the staff to control the AV components through a holistic solution.”

To give the venue’s annual million-plus patrons a compelling, enjoyable experience, the ArtsQuest nonprofit needed the flexibility

to distribute digital and analog signals throughout the 65,000-square-foot facility, which hosts concerts, movie screenings and live theater.

Flexible Sound and Video Distribution

AVI-SPL’s dynamic solution combines best-of-breed technologies from highly respected companies like AMX, NEC and Sharp. This combination – made possible by AVI-SPL’s design and build expertise – brings control panels, digital media, audio and video into a cohesive system, allowing staff to control the facility’s resources from multiple locations. To give but one example, staff from ArtsQuest can take the audio from a live performance (or a prerecorded source) and send it throughout the building or to specific zones, all from simple-to-use, accessible control panels. For the main areas – such as bars, lobbies

“We were focused on making it easy for the staff to control the AV components through a holistic solution.”

With wireless control and touch panels located throughout the facility, the staff broadly distributes high-quality sound and video throughout the venue.

and meeting rooms – as well as the second-floor’s pre-function area, distributed systems send audio to loudspeakers. Digital signal processors integrated in the control system ensure that the sound is excellent.

A Community Partner Makes Good on Its Mission

With wireless control and touch panels located throughout facility, the staff broadly

distributes high-quality sound and video throughout the venue, giving guests tailored entertainment while keeping them informed about upcoming events.

Since opening in May 2011, the ArtsQuest Center at SteelStacks has hosted numerous high-profile performances, banquets and private events, receiving accolades from the press and patrons alike.
