

Your Life with Self Healing Switches

Not every switch is created equal... some have incredible features like Self Healing. If you don't know, then read on, my friend. Your eyes are about to be opened to a new level of awesome.

With Self Healing, your switch is capable of Auto-Recovery and Power Scheduling -- which means any time PoE-connected devices fall offline or go unresponsive, your switch will automatically reboot them, and you'll be able to set schedules that power PoE-connected devices on or off, based on whatever schedule you create. Imagine it. No more rolling trucks to Karen's and back for simple power cycling. She'll have to go back to calling the plumber over if she wants someone to talk to about the Hallmark Channel.

AMS-4424P and XMS-2624P
