

MAKE YOURSELF HEARD

360° USB MICROPHONE

Part of the TeamUp+ Series, the 360MIC was designed to sense out high-quality sound (acoustic energy) from any direction and convert the audio into USB allowing for a seamless connection to your computer. Since the 360MIC is UVC compliant, no drivers or additional downloads are required, allowing for a painless experience when using Windows or Mac operating systems. The series brings a contemporary style that compliments any setting and can easily be positioned for different scenarios.

From traditional conferencing, hybrid classrooms, everyday video/audio calling or anywhere else, the 360MIC will ensure you are heard.

CREATING THE RIGHT PRODUCTS FOR YOUR SPACE

The advantage of our USB 360MIC is its ability to pick up sounds accurately, even in most reverberant spaces, while capturing sounds equally from all directions. The 360MIC offers you the freedom to move around your space while sounding crystal clear on your calls. Using the USB port also means your computer will do the set-up for you, since the device is plug 'n play.

MICROPHONE PLACEMENT EXAMPLES

Multiple Applications

Most spaces do not require a complex audio system to achieve clear audio. Ideal for one-on-one and small-group meetings, the 360MIC provides audio clarity that can't be achieved with a webcam or personal cell phone. The compact design takes up minimum space on a desk or table and can even be portable for traveling. Today's calls are more important than ever before. Poor audio quality can lead to collaboration problems and confusion on calls. Make sure you are providing an ultra-clear conferencing experience by adding the 360MIC into your offering.

For larger spaces, cascade / daisy-chain multiple microphones using a USB hub and third-party software for multi-user applications.

Contact your Liberty AV rep for additional USB options.
